Communication Server 1000 RIs.5.0 IP Networking Design

QUESTION: 49

A customer is upgrading an existing Communication Server (CS) 1000S at Rls. 4.5 to a CS 1000E Rls. 5.0. They wish to utilize Media Security (SRTP). Which new hardware components can be used to replace the Voice Gateway Media Cards to support this requirement?

- A. DSP Daughterboard
- B. Call Processor Pentium Mobile
- C. Commercial Off-the-Shelf Server
- D. Media Gateway Controller Card 32
- E. Media Gateway Controller Card 32S

Answer: A, E

QUESTION: 50

A customer with a Communication Server (CS) 1000E at Rls. 4.5 with a Media Gateway (MG) 1000T is planning to migrate the functionality of the MG 1000T into the CS 1000E and then upgrade the system to Rls. 5.0. Which component must be replaced in this situation?

- A. MG 1000E VGMC
- B. MG 1000E Call Server
- C. MG 1000T SSC cards
- D. MG 1000E SSC cards

Answer: C

QUESTION: 51

A customer is installing a new Communication Server (CS) 1000E Rls. 5.0 High Availability (HA). The customer wants Advanced Call Center Services but does not require networking. Which Software Service Level should they order?

- A. Premium Service Package
- B. Business Service Package
- C. Enhanced Service Package
- D. Enhanced Business Service Package

Answer: C

QUESTION: 52

A customer is upgrading a Communication Server (CS) 1000E Rls. 4.5 system to a Communication Server (CS) 1000E Rls. 5.0 High Availability system. They wish to provide backup Terminal Proxy Server (TPS) services in case of a Signaling Server failure. Which component does not provide backup TPS services?

- A. ITG-Pentium (ITG-P)
- B. DSP Daughterboard
- C. Media Card 32-port (MC32)
- D. Media Card 32-port S (MC32S)

Answer: B

QUESTION: 53

A customer is upgrading a Meridian 1 Option 81C Rls. 4.5 equipped with a CP4 processor to a Communication Server (CS) 1000M Multi-Group. Which option is available for the call processor?

- A. CP-PM
- B. CP PII
- C. CP PIV
- D. 68060E

Answer: C

QUESTION: 54

A customer is upgrading an existing Communication Server (CS) 1000S at Rls. 4.5 to a CS 1000E Rls. 5.0 Standard Availability (SA) with a single Media Gateway 1000E chassis. As part of this upgrade, a CP-PM Call Server Card has been added. What happens to the Terminal Number (TN) format during the upgrade?

- A. The format used by the small system (Card-Unit) is retained.
- B. It is automatically converted to the large system format of Loop-Shelf-Card-Unit for IP Phones only.
- C. It is automatically converted to the large system format of Loop-Shelf-Card-Unit for all

assigned TNs.

D. It must be changed to the large system format of Loop-Shelf-Card-Unit through manually re-programming all devices assigned TNs.

Answer: C

QUESTION: 55

A customer is upgrading an existing Communication Server (CS) 1000E at Rls. 4.5 to CS 1000E Rls. 5.0 High Availability (HA). The customer has decided to keep the CP-PII call processor. What is the maximum number of Media Gateway 1000E systems supported in this configuration?

- A. 15
- B. 25
- C. 30
- D. 50

Answer: C

QUESTION: 56

A customer is upgrading an existing Media Gateway (MG) 1000T to a Communication Server (CS) 1000E and maintaining it in autonomous (standalone) mode. What best describes this upgrade?

- A. This upgrade is not a valid option in Rls. 5.0.
- B. The MG 1000T Call Server is upgraded to a CP-PM Call Server and all other hardware remains.
- C. The MG 1000T is upgraded to Rls. 5.0 maintaining all hardware but will require a new processor swap-out in the next release.
- D. The MG 1000T SSC Gateway Controllers are replaced by Media Gateway Controllers, one CP-PM CS is added, and the PRI Cards are maintained.

Answer: D

QUESTION: 57

A customer would like to upgrade their Communication Server (CS) 1000E Standard Availability system to a High Availability (HA) system. What is the minimum requirement to consider the system a CS 1000E-HA?

- A. Dual Signaling Servers
- B. Alternate Call Servers with Automated database Replication
- C. Dual Call Processors using an SLAN for database synchronization
- D. Dual Call Processors using a High Speed Pipe (HSP) for database synchronization

Answer: D

QUESTION: 58

A customer would like to upgrade their Communication Server (CS) 1000E Standard Availability system to a High Availability system. To function properly, the new keycode file must be loaded on which server(s)?

- A. The new CP-PM Call Server only
- B. The existing CP-PM Call Server only
- C. Both CP-PM call servers that utilize the SLAN
- D. Both CP-PM Call Servers that utilize the High Speed Pipe (HSP)

Answer: D

QUESTION: 59

A customer would like to upgrade their Communication Server (CS) 1000E Standard Availability system to a High Availability (HA) system. If HA Package 410 is not present in the keycode, which two will result?

- A. An error occurs, and the customer must reboot the existing Call Server.
- B. The existing Call Server software is modified to block the HSP connection.
- C. The first CP-PM Call Server recognizes the second CP-PM Call Server, and the system runs as a High Availability system.
- D. The CP-PM Call Server runs as a single core system, even if the system has two cores and the HSP ports on both cores are connected.

Answer: B, D

QUESTION: 60

A customer is upgrading an existing Communication Server (CS) Rls. 4.5 Media Gateway (MG)

1000T with an expansion, converting it into a stand-alone CS 1000E Rls. 5.0 with two IP Media Gateways. This upgrade includes a Media Gateway Controller card with two low-density DSP daughter boards per Media Gateway. How many DSP channels does this configuration provide per Media Gateway?

- A. 8
- B. 16
- C. 32
- D. 64

Answer: D
